

THE EVENING STAR.
WASHINGTON.
MONDAY, OCTOBER 2, 1893.
CROSBY S. NOTES. Editor.
THE EVENING STAR has a regular and permanent circulation in Washington more than three times larger than that of any other paper. As a newspaper and a reading medium it has no competitor.

Letters to THE STAR should be so addressed, or to the Editor of Business Department, according to their character or purpose, not to any individual connected with the office.

So many things not long ago deemed utterly impossible are now in practical operation that the careful human being is slow to doubt and ready to investigate. For some time past that profound scientist and advanced electrician, Prof. Nikola Tesla, has been making public some of the wonders evolved in his laboratory, and in a recent lecture told his hearers that so strong had become his conviction of the possibility of the transmission of intelligible signals and perhaps even of mechanical energy to any distance without the aid of conducting wires, that he no longer regarded it in the light of mere theoretical possibility, but as a serious problem in electrical engineering, which seemed to him certain to be carried out. Anticipating this outlook it is less startling than that opened up when Prof. Moore, pleaded with Congress for means with which to construct an international telegraph line between this city and Baltimore. Telegraphy by induction has been successfully accomplished to and from moving trains in this country, but no effort seems to have been made to discover the limit of space through which the electric current can be transmitted. Tesla has been doing on this line in Great Britain. According to the Engineering Magazine, Mr. W. H. Preece, who is the British government's principal electrician, has made several conclusive experiments in the transmission of electric signals through space.

Heavy copper conductors were suspended on poles for a distance of 1,267 yards along the shore of the Bristol channel. More than three miles away, on an island, a gutta-serena covered wire, 600 yards in length, was laid. Through the wire circuit an alternating current of 150 volts and a maximum strength of sixteen amperes was transmitted, which could be broken up into signals in the usual way by means of a Morse key. The receiving apparatus, consisting of telephones and, it is said, that no difficulty was experienced in reading the signals. Another experiment, the wires being nearly five and a half miles apart, was not quite so successful, for although signals could be received, the communication was not so clear as possible. Mr. Preece is now devoting himself to investigative study and is fully confident that within a little while what but a year or two ago was a great mystery will soon be satisfactorily solved. Of course, it will take ingenuity and time to make the consequent use of the message-bearing currents that either meet directly or at angles, but the human mind has accomplished so many marvelous things that the voice of the critic is silenced. If Prof. Tesla and Mr. Preece can make their theories commercially good and thus do away with the necessity for most of the overhead wires they will deserve great public monuments, and if while they are doing the people a service they show the telegraph and telephone companies how to get along without the necessary but expensive conduits they will not be forgotten by the rich corporations. Two birds will thus be destroyed by one current.

Of course the proposition of Wizard Edison to compress wheat into dollars as the contribution of science toward the solution of the financial problem is interesting, but the suggestion will not be received by the public with the usual amount of enthusiasm that greets the electrician's ideas. There are a few dinky folks who think that there is a vast danger to health in the antiquated breadstuffs that are kept in circulation until they are fit subjects for the South Capital street establishment. They will doubtless protest against the idea of squeezing a bushel of wheat into a pancake, embellishing it with the buzzard mark, and setting it afloat through the unwashed channels of trade. For, says Mr. Edison, this wheat dollar is never to lose its quality as food, and when banks fail and checks are dishonored and hard times set in, the ancient and honorable stocking toe will be abandoned for the boiling pot, and the dollars of our posterity will be soaked in a culinary sense in the hot soup of the breadstuffs and the germ laden disc is ready to be turned into bread and butter cakes. With specimens of the wretched issue of "Hancock two's" still in circulation, the proposition of Mr. Edison is a little nauseating.

International competition has reached an extremely interesting stage when it is proposed to have an English and an American locomotive race for the world's championship. Such a contest now seems to have been arranged and although the general public has but little information as to the respective merits of the fleet machines it will at once proceed to furnish itself with mechanical terms and to converse liberally as to the conditions under which the utmost rapidity may be generated. At this time even the small boy knows that the English locomotive is stronger and heavier than the American one, and that the English locomotive is faster and more powerful than the American one.

The statement that Caterina Garza spent three weeks and many dollars at the world's fair brings to the front the first good reason for the so-called revolutionist leveled assessments upon his friends along the Rio Grande.

The more rapidly Bismarck's health improves the less anxious does the Emperor William seem to be for his friendship.

Some day when the present Archduke Franz Ferdinand of Austria is on the Austrian throne and his people are suffering from a lack of pork or corn the haughty monarch may have reason to regret his treatment of Chicago's social leaders. A few days ago it became known to those who drag Chicago's society around by the ear that the archduke would be in their midst very soon, and on Wednesday evening last the future emperor, accompanied by Count Leo von Starbuck-Stuppach, arrived in the world's fair city. Chicago would have received the illustrious ones with great ceremony, but the archduke had made up his mind to be let alone, and had the Chicagoans who so dearly love a lord been possessed of that common sense which is so uncommon they would have gratified royalty's whim. But Chicago society is not easily controlled, and when it wants to make the acquaintance of a prince pays but little attention to the dictates of modesty and attention to all to the expressed desires of him whose hand they would deliver to kiss. Consultation between a few of the leaders resulted in the organization of that purely American product, a surprise party. And it was a surprise most of the surprising being done by the archduke himself.

Eleven of Chicago's brightest and best-four of them being ladies—resolved to meet Austria's future ruler in spite of himself, and clad in gorgeous costumes such as befit the planned occasion they waited the coming of their victim in the Austrian section of the world's fair. The general public was excluded from that interesting subdivision, and for this precaution the members of the surprise party are now extremely thankful. The archduke arrived in company with Prince Isenberg-Berstein and Count Wurmbrand-Stuppach. The Austrian consul, who was one of the waiting eleven, and who bowed profoundly to the coming monarch, was passed by unnoticed, nor was even a glance bestowed upon the early apparel and deeply anxious "surprise party." It was all over in a minute, and although none of those who experienced the well-deserved but paralyzing snub have as yet cared to give expression to their real opinion of the man they started out to surprise it is generally believed that there would have been no absence at any function given in Chicago in honor of the Archduke Franz Ferdinand of Austria.

Philadelphia is perturbed. Normally the City of Brotherly Love is calm and dignified, but when any one endeavors to relieve it of something which has, by long association, come to be regarded as one of the city's own institutions, then is there outburst of state wrath and the clamor of righteous indignation. Conscientious readers of the newspapers have undoubtedly noticed that for some time past there has been trouble between Philadelphia and the Treasury Department over a site upon which to erect a mint building, the structure that now houses the government coiners in that city being too small and too ancient. There are several suitable sites, but the prices demanded by the thirty cities who own them are much too high. Negotiations are still pending, but the day of agreement seems not far away. New York or Tammany, which is the same thing—wants to have the mint transferred to its keeping, and it is moving to bring about what it believes to be a desirable consummation. The principal argument used in that connection is that the mint in which the government purchases very much of its bullion, and that by having the mint right at the market much money could be saved that is now expended in express charges and that there is another inducement, and that is said to be a free building site, and the value of such a donation is, it is understood, being urged upon the authorities. Tammany could easily afford to give all the ground needed, for with the mint in its grasp it would have less than fifteen hundred places for faithful members of the most corrupt political organization in the world of today. If common sense prevails in the discussion as to where the mint should be located, it will be the national capital; it was never intended for Philadelphia, and was merely left there because it was too bulky to be moved here when the seat of government was transferred. Neither Tammany nor Philadelphia can present one sound reason why the nation's biggest coin factory should be elsewhere than at the nation's place of business.

On Thursday night the pride of Great Britain, the yacht Valkyrie, and America's hope, the yacht Vigilant, will spread their sails to the breeze and start in the first of three races which are to give one of the represented nations the yachting championship of the world. The contest in themselves are deeply interesting, and will be witnessed by great multitudes of the expert and inexpert, but the racing of the pretty craft will result in more than the giving of temporary pleasure to the multitudes who see them, and that is the real reason why this competition has stimulated the inventive genius of those whose lives are devoted to the construction of ships, and although there are times when it seems as though the limit of sailing speed had been reached, yet keen competition has again and again compelled changes in form and weight that produced more satisfactory results. As to the relative merits of the two boats on which the public eye is fixed, there is no trustworthy information. The Valkyrie has established a trans-Atlantic reputation that indicates the possession of remarkable qualities, and there is no doubt whatever as to the Vigilant's activity, but not until after Thursday's encounter can even the best of us make more than shake their heads and look wise.

Amateur theatricals are much more readily than the French did. Twice within a few days of stage villains have been shot by defenders of female innocence who didn't know the pistols were loaded.

Senatorial dignity in the accurate sense of the phrase is in a fair way to rival the dodo as an extinct celebrity.

SHOOTING STARS.
The Critic Rebuked.
"Isn't there something the matter with the feet in this poem?" asked the editor.
"Sir," replied the unhappy man, who stood by his desk, "I am a poet; not a chirpologist."

A Young Man's Observation.
Her feet light in the dance
For three hours by the clock;
She danced for miles; but homeward bound
She wouldn't walk a block.

A Horrible Illusion.
The note of the garbage horn sounded on his ear.
"Can it be possible," he exclaimed, starting from his chair.
"Can what be possible?" asked his wife.
"That after all these days that mosquito has traced me here all the way from the Atlantic ocean."

A Giddy Wooer.
"When to Eliza I disclose
My love, it must surprise her;
'Twill stun her slightly, I suppose;
I hope 'twill paralyze her."

His Motto.
"Can't you ever let me rest?" asked the impetuous man.
"Certainly," replied the lady collector. "My motto is requiescat in pay—see?"

What protest 'gainst monopoly
It raises in the soul,
To see the man who sold us ice,
Now go to selling coal.

A bright young woman who came into the employ of the government under a former administration has retained her position quite serenely. This has surprised some of her acquaintances, who had given the impression that there is no limit to the "official headsman's" scope of endeavor. The only comment she has made is the following adaptation of the good old song, which she sent in a letter to a friend—
"Where are you going, my pretty maid?"
"To work for the government, sir," she said.
"Why don't you resign, my pretty maid?"
"Nobody's asked me, sir," she said.

Modest.
"My wife reads a great deal of poetry," remarked a Washington minister.
"You have quite a literary household, then?"
"Yes. She's poetic and I'm prosy."

A Dream of Luxury.
"I oft get sick," he murmured.
"But the doctor says a 'cold,'
Or a 'touch of indigestion,'
And the simple story's told.
But, some day, when I've struggled
To the ranks of wealth or fame,
I will revel in an illness
With a stunning Latin name.
The Nation and the Senate.
From the New York World.
National prosperity is growing tired of waiting on senatorial courtesy."

THE EVENING STAR.
WASHINGTON.
MONDAY, OCTOBER 2, 1893.
CROSBY S. NOTES. Editor.
THE EVENING STAR has a regular and permanent circulation in Washington more than three times larger than that of any other paper. As a newspaper and a reading medium it has no competitor.

Letters to THE STAR should be so addressed, or to the Editor of Business Department, according to their character or purpose, not to any individual connected with the office.

So many things not long ago deemed utterly impossible are now in practical operation that the careful human being is slow to doubt and ready to investigate. For some time past that profound scientist and advanced electrician, Prof. Nikola Tesla, has been making public some of the wonders evolved in his laboratory, and in a recent lecture told his hearers that so strong had become his conviction of the possibility of the transmission of intelligible signals and perhaps even of mechanical energy to any distance without the aid of conducting wires, that he no longer regarded it in the light of mere theoretical possibility, but as a serious problem in electrical engineering, which seemed to him certain to be carried out. Anticipating this outlook it is less startling than that opened up when Prof. Moore, pleaded with Congress for means with which to construct an international telegraph line between this city and Baltimore. Telegraphy by induction has been successfully accomplished to and from moving trains in this country, but no effort seems to have been made to discover the limit of space through which the electric current can be transmitted. Tesla has been doing on this line in Great Britain. According to the Engineering Magazine, Mr. W. H. "You have quite a literary household, then?"
"Yes. She's poetic and I'm prosy."

A Dream of Luxury.
"I oft get sick," he murmured.
"But the doctor says a 'cold,'
Or a 'touch of indigestion,'
And the simple story's told.
But, some day, when I've struggled
To the ranks of wealth or fame,
I will revel in an illness
With a stunning Latin name.
The Nation and the Senate.
From the New York World.
National prosperity is growing tired of waiting on senatorial courtesy."

GRAND ELECTRIC DISPLAY TONIGHT.
Reception from 8 p.m. to 10 p.m. at the new Palais Royal, corner G and 11th streets. Friends and the public are cordially invited to attend. Those wishing to avoid the inevitable crowding of tonight are notified that the store will be open tomorrow night.

"Opening" Souvenirs.
Tomorrow morning, commencing promptly at 8 o'clock, the grand collection of new autumn stocks will be distributed at nominal prices, hints of which are given below. These practical souvenirs of the "opening" of the new season are in line with the Palais Royal's policy adopted fifteen years since.
